WICHERT ** ILLINOIS

General Information

The prices in this catalogue include postage or express charges and are for first size bulbs.

We will be pleased to quote prices on smaller sizes and larger quantities. As we are not issuing any wholesale list this season, please state varieties of which prices are desired.

All stock guaranteed true to name and to size. No substitutes will be made unless desired.

As our stock of some varieties is limited, early orders are suggested.

Remittance should be sent with orders from unknown parties and payment be made in the most convenient manner. Checks or money orders are preferred.

The Modern Flower Grower

The Modern Flower Grower is an instructive and splendid monthly magazine published in the interests of lovers of flowers. Considerable of space is devoted to the gladiolus and its culture as well as other popular flowers. Every flower grower should be a reader. It is published by Madison Cooper, Calcium, N. Y. The price is \$1.50 per year; 3 years for \$3.50.

The Gladiolus and Its Culture

In addition to their great beauty, the gladioli are becoming more popular on account of their ease of culture.

The gladiolus will thrive in almost any good garden soil, but seems at its best in soils that are more or less sandy. Plant in a sunny location away from trees or large shrubs. The gladiolus will not do well in a location that does not receive sushine the greater part of a day.

Well rotted cow or horse manure are the best fertilizers to use on average soils; fresh manure should not be used unless it has been worked into the soil the fall before planting time. Well balanced fertilizers may be used to an advantage if used as a top dressing and worked into the ground at planting time. Generally speaking handle your soil for planting exactly the same as for vegetable growing.

Plant the bulbs in furrows about 4 inches deep and 6 inches apart in the row; the rows should be 18 inches apart so as to make it more convenient for cultivation. Cultivate well and often so to conserve moisture and keep the weeds down. Give them the same care as you would for a well cared for garden and be well repaid for results, although they will respond to more poor care than any other flower. It is well to water them often from the time the buds show until the flowers are in bloom.

The first planting may be made in the spring as soon as the ground is warm and in good workable condition. If a succession of blooms are desired throughout the summer, new plantings may be made about 10 days after the foliage of the previous planting show through the ground and additional plantings continued until the last week in June which is about as late as it is safe to make the last planting in order to secure flowers before frost.

Contrary to common belief, the flowers of the gladiolus do not mix colors when different varieties are planted side by side.

If the flowers are intended for indoor use, the spike

should be cut as soon as the first bud opens, the balance of the buds will open when placed in water almost to the tip of the stalk; a small part of the bottom of the stalk cut off each day and fresh water used, they will last a week or ten days when treated this way.

Care must be used when cutting the spike so as to leave as much foliage as possible on the plant. This is necessary if the bulb is intended to be saved and planted another season.

The bulbs may be dug as soon as the foliage shows signs of turning brown or are hit by hard frost. Cut the stem close to the bulb as soon as lifted and allow the bulbs to dry in the sun two or three days before storing. Any place suited to storing potatoes will do well. The old core and roots may be removed as soon as they separate easily.

Named Varieties

3 bulbs at dozen rate; 25 bulbs at 100 rate.

AMERICA—The well known and	Each	Dozen	100
ever popular lavender pink\$.05	\$.50	\$ 2.50

MIXTURE—An assortment of all colors, mostly of named varieties that have been accidently mixed with other varieties added to insure a good assortment of colors	.50	2.50	

Primulinus Hybrids

A distinctive type of gladioli with hooded petals, the flowers are gracefully placed on long, slender stems. The primulinus types are becoming more popular for basket and decorative work on account of their graceful form and artistic shades and colorings. The colors are mainly of orange, red and yellow shades.

ADORABLE—Blush white, pinkish shading on lower petals. Tall spike; early bloomer	.15	1.50	
ALICE TIPLADY—A grand, large primulinus of most beau-			
tiful orange saffron color. The finest orange glad	.15	1.50	10.00
DELICATE—Soft pink center, edged darker pink, outside petals nearly white. Strong			
grower	.15	1.50	

	Each	Dozen	100
DOROTHY WHEELER—Beautiful pink, ruffled petals	.20	2.00	
GOLD DROP—An extra choice, large pure deep yellow with beautiful red line on petals	.50	5.00	
MAIDENS BLUSH—(Enchantress)—A fittingly named delicate pink, tall and slender spikes. Awarded many prizes for the most beautiful pink primulinus in existence. Extra early	.15	1.50	
PRIMULINUS (species) — The native type from South Africa, from which the primulinus hybrids were created through crossing with cultivated forms. Small primrose yellow on wiry		1.00	
stems	.10	1.00	
PRIMULINUS HYBRIDS— Mixed colors, mostly orange, red and yellow shades, choice assortment	.50	2.50
